20 YEARS AFTER

WHAT A YEAR 2020 !

First of all, we wanted to share our support to all people in this uncertain time.

Despite the difficulties encountered, it was important for us to maintain our level of service and quality in order to deliver you in the usual way. Many thanks to you for having continued to choose Vetedy's systems. After 20 years of *Softline*® and 13 years of *Techniclic*®, 2020 marks the pre-launch of our new decking system *Technideck*® with aluminum structure. It is the result of 20 years of experience and thousands of projects as well as a continuous research and development philosophy.

LAST YEAR.

Every year, we have the chance to receive many photos of projects made with Vetedy's products from our partners and customers. Either in cladding or decking, more and more of you are sharing your achievements with us and we wanted to thank you once again for this.

Your trust in our products is giving us the opportunity to share your realizations with everyone.

If you missed the 3 winners of our last photo contest, you will find them hereafter.

The first place has been awarded to our Egyptian partner with a magnificent villa shot during the night.

The second one, has been awarded to our Romanian partner with the indoor relaxing area. Last but not least, our french partner from Perpignan has shown to everybody the amazing flexibility of the *Softline*® System with this great "Palm Decking".

THE PERFECT DECK.

The *Softline*[®] clip is a 100%-invisible fastening system for decking. It is patented and manufactured near the Luxembourg border by Vetedy Group. The clip is made of composite material with high mechanical strength and quality but still remains flexible to allow the wood to move laterally without any constraints. The clip creates an automatic and regular gap, a good ventilation of the wood as there is no direct contact between the board and the understructure. It also allows a horizontal & vertical frame 100%-invisibly fixed. The system includes a tongue & groove system for a perfect junction and is delivered with approved wooden species for an extreme durability of the decking.

SLIDE, CLIC AND CLIP !

The *Techniclic*® system has been developed based on the *Softline*®'s technology. Produced in the same material, it differentiates itself by the fact that the clip has to be inserted in a basis profil instead of being directly scewed on the understructure. The *Techniclic*® installation can be done outdoor or indoor for walls and ceilings. The boards are available in 3 widths and with 3 types of spaces. It offers many possibilities to create your own personalised design with a perfect aesthetic and durability.

This simple concept will give your project a touch of nature and drastically improve the design of the building.
